1. Introduction

BOXIE is a home organization application that allows users to keep track of their home storage more effectively. Utilizing an easy-to-understand organization scheme and some handy tech, BOXIE allows users to take better charge of their things in their houses.

BOXIE shines most in situations where people would rather not go digging through various storage locations or bins to find a specific item. Whether you just moved and want to know exactly what is contained within a box, or you want to find a specific item—like camping gear or holiday decorations, BOXIE is a great solution for these types of use cases. It can also provide an easier way to be more prepared, in the event of a disaster, so that you can know exactly what was lost and you can more easily and accurately file an insurance claim.

2. Account Creation and Logging In

2.1 On mobile

2.1.1 Logging in

If you have an account, head over to the login screen which will prompt you with the photo below. From here type in your email address and password and click login.

2.1.2 Signing up

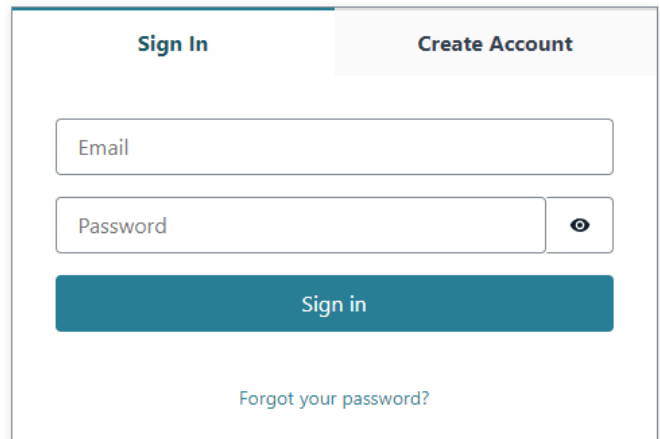

If you don't already have an account, go ahead and select the signup screen shown on the side. From here enter a valid email address and strong password then click the "Sign Up" button. It then will send you an email from "no-reply@verificationemail.com" This email may go to spam, so please check there if you don't seem to see it within a minute or two. Get the verification code and paste it in the box above the "Confirm Sign Up" button then click the "Confirm Sign Up" button and your account should be successfully created.

2.2 On web

2.2.1 Logging in

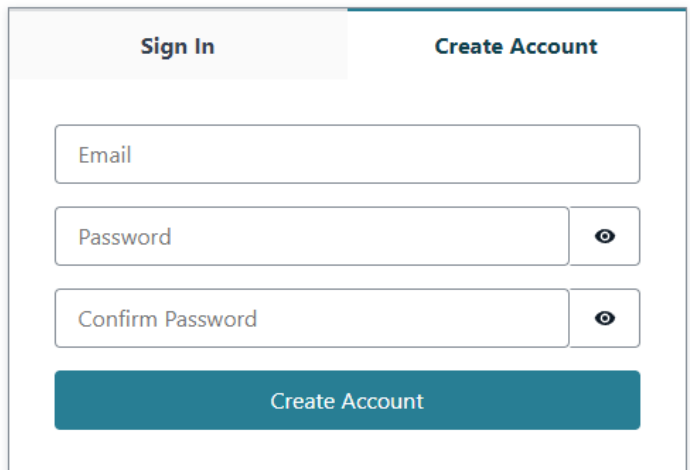

When first loading the website you will be prompted with a sign-in screen. If you have already created an account using the email and password you created. If you forget it click “forgot your password?” At the bottom.

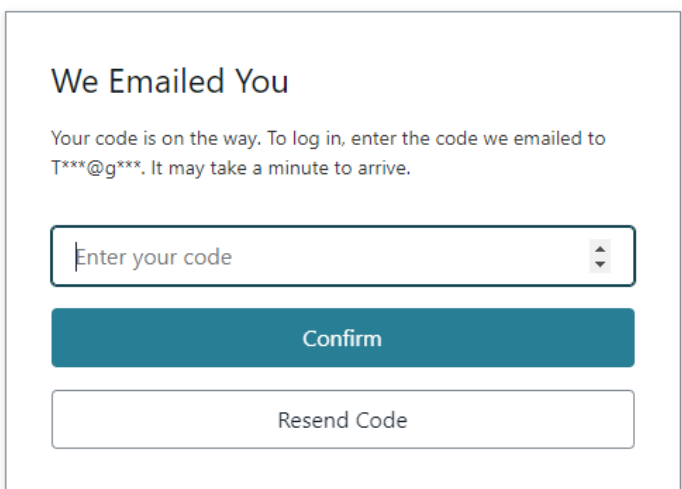

The Sign In screen features a header with two tabs: "Sign In" (active) and "Create Account". Below the tabs are two input fields: "Email" and "Password". The "Password" field includes a toggle icon (an eye) to the right. A teal "Sign in" button is positioned below the input fields. At the bottom, there is a link that says "Forgot your password?"

2.2.2 Signing up

If you don't already have an account head on over to the “Create Account” section it will require a valid email address and strong password. It then will send you an email from “no-reply@verificationemail.com” This email may go to spam, so please check there if you don't seem to see it within a minute or two. Get the verification code and paste it into the box and your account should be successfully created.

The Create Account screen features a header with two tabs: "Sign In" and "Create Account" (active). Below the tabs are three input fields: "Email", "Password", and "Confirm Password". Each of the "Password" and "Confirm Password" fields includes a toggle icon (an eye) to the right. A teal "Create Account" button is positioned below the input fields.

The "We Emailed You" screen displays the heading "We Emailed You" followed by the text: "Your code is on the way. To log in, enter the code we emailed to T***@g***. It may take a minute to arrive." Below this text is a text input field with the placeholder "Enter your code" and a dropdown arrow on the right. Underneath the input field is a teal "Confirm" button. At the bottom is a button labeled "Resend Code".

3. General BOXIE Organization Strategy

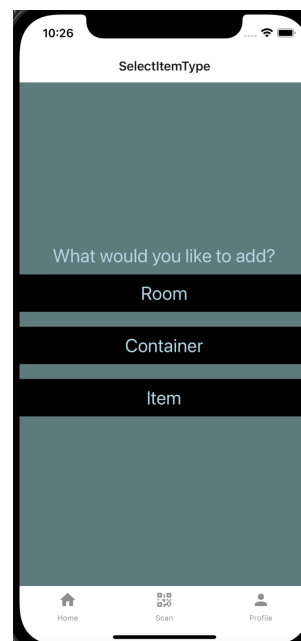

The BOXIE app data is organized as follows, the user has a residence that is made up of some number of rooms, each of those rooms has containers, those containers have items, and those items hold data like names, photos, and descriptions.

3.1 Rooms

Rooms are displayed from the main home page in a list, top to bottom with the containers in that room displayed left to right.

3.1.1 Creating a room

From the home page hit the plus button in the bottom right-hand corner and select “Room” from the item select screen. Then the only information that is required to create the room itself is the name.

3.1.2 Editing a room

Editing a room is not a feature we currently support.

3.1.3 Deleting a room

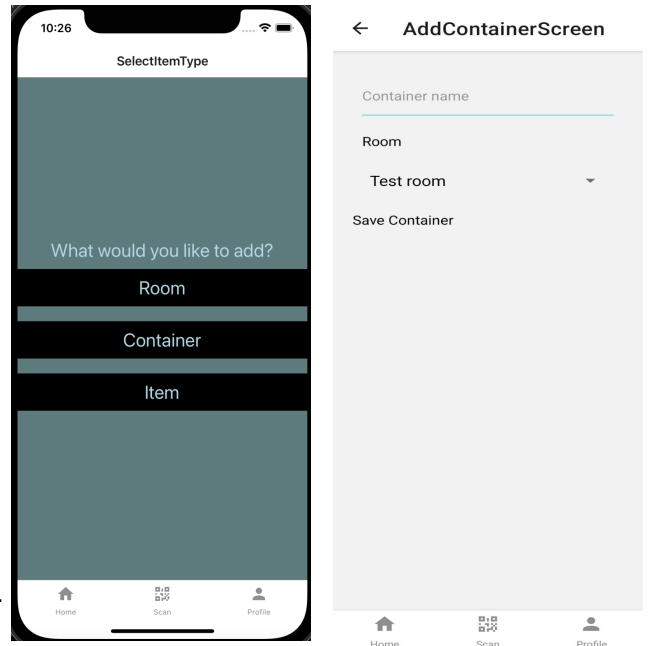

Editing a room is not a feature we currently support.

3.2 Containers

Containers are displayed left to right within each room on the main screen with the name of the container displayed in the center of the icon. Clicking and opening a container will take you to a new view that shows: the room of the container, the container name and each item within the container.

3.2.1 Creating a container

From the home page hit the plus button in the bottom right-hand corner and select “Container” from the item select screen. To create the container you must select a room for it to be in and a name for the room.

3.2.2 Editing a container

Editing a container is not a feature we currently support.

3.2.3 Deleting a container

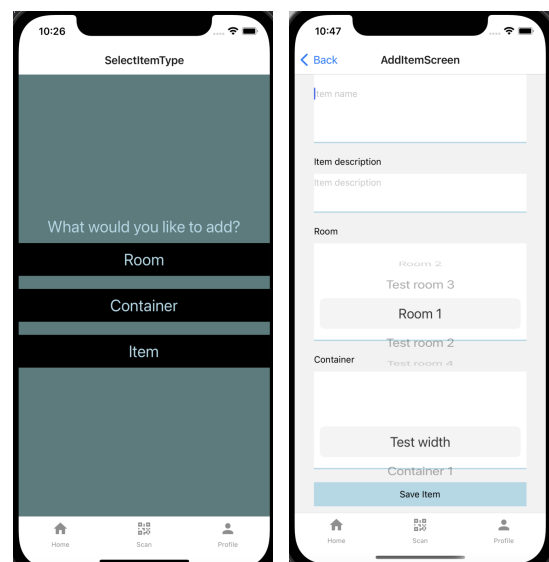

Deleting a container is not a feature we currently support.

3.3 Items

Items are the most basic unit of data within BOXIE. Items can contain images, descriptions, and names and are viewed by selecting a container from within a room, then selecting the desired item from the container view screen.

3.3.1 Creating an item

From the home page hit the plus button in the bottom right-hand corner and select “Container” from the item select screen. To create the item you must provide an item name, and description and have a valid room and container within that room. You will be able to add a photo to the item from the create item screen or from the view item screen once that feature is available.

3.3.2 Editing an item

Editing an item is not a feature we currently support.

3.3.3 Deleting an item

Deleting an item is not a feature we currently support.

4. User Profile Management

4.1 Viewing profile details

Users simply tap on the “Profile” Icon in the bottom right of the mobile app.

Viewing the profile is not yet implemented on the web version of the app.

4.2 Making profile updates

4.2.1 On mobile

Feature coming soon in a future update, reach out if you have any problems.

4.2.2 On web

Feature coming soon in a future update, reach out if you have any problems.

5. QR Codes

5.1 Creating and printing QR Codes

Feature coming soon in a future update, reach out if you have any problems.

5.2 Scanning QR Codes

Navigate to the middle button on the bottom toolbar to open the app’s QR scanner. Point the camera to one of BOXIE’s QR codes. Once scanned successfully, the app will automatically navigate to the corresponding container’s information.

6. General Troubleshooting

The first step in troubleshooting this app is to force close the app or restart the web page and restart whatever process caused the error, the app is designed specifically to reset the important information on each login and this should provide the best way to fix most issues you come

across. In the event that this does not work here are some other possible problems and their solutions.

6.1 Potential issues

Issue: Cannot create an Item

Solution: Double-check that you have created both a room and a container within the specified room. Items must be created within a container, and containers must be created within a room.

Issue: Cannot create a Container

Solution: Double-check that you have created a room for the container to be contained by, Containers must exist within a room.

Issue: Room, Container or Item has corrupted data and cannot be opened

Solution: In this event, changes will need to be made directly in the database removing these items. To accomplish this please contact the admins with database access directly with the name of the relevant room/container/item.

Issue: QR Code cannot be scanned

Solution: The first solution is to follow the process of printing the QR Code again and retrying the scanning. If the problem persists contact the admins with the relevant container name to have the QR Code manually adjusted.

7. User Guide Structure/Explanation

We decided to make this more of a list of features and how to navigate and use each of the features in our application. This makes it easy to search and find things if the user happens to get stuck. They can search for signing in or creating a room and we have a guide on how to do so. We choose this way because each page in the app represents a feature we added.
